INTRODUCTION

Amongst quite a number of tried and tested policies and strategies, high unemployment still appears to be persistent in the South African labour market. This is not only as the result of the challenges that are created domestically but also as a result of the continuing global economic crisis, in particular in the Euro-Zone which affects the level of foreign direct investment in the South African economy. (It is understood that the lack of investment injection could reduce the overall economic growth as it could also affect employment opportunities in the country).

There are various arguments about the cause of unemployment in South Africa. As reported, South Africa's poor education system and lack of productivity is costing jobs¹. High unemployment in South Africa is likely to persist for the foreseeable future as domestic growth forecasts continue to be revised downward². Despite all these arguments, this annual report is meant to reflect on the job opportunities, e.g., vacancies created by the South African economy in line with the prospect of sectoral skills needed³ as against available skills in the country. The data used to analyse and measure these situations is collected through various newspapers covering all the provinces, administrative data, and the Department of Labour's Quarterly Labour Force Survey.

It is noted that the South African economy is faced with the triple challenge of unemployment, inequality and poverty. But amongst the three challenges, high unemployment (25.2% in quarter one of 2013) coincides with low economic growth (0.9% in quarter one of 2013). Within the Department, about R4 billion from the UIF was lent to businesses through the Industrial Development Corporation (IDC) to save or create jobs. It is reported⁴ that 21 234 jobs were created and 20 161 saved for the period up to 31 March 2013. The UIF continues to play a pivotal role in the area of job creation.

The main purpose of this report is to assess the job opportunities, job losses and the skills gaps in the country during the financial year 2012/13, in order to inform policy makers on the changes of skills supplied and demanded, then draw some suggestions on how policy makers can intervene and minimise the risks associated with unemployment. As previously noted, solutions to the critical challenge of unemployment will include, amongst others, well drafted and sound economic policies that need to be coordinated, implemented and monitored by all parties: Government, Organised Business and Organised Labour. A common understanding, strong partnership, minimum degree of agreement and accountability must be considered as critical stimulus to advance the agenda of halving the unemployment rate by 15% in 2020. The National Development Plan (including the National Growth Path) is our blueprint document that will guide us through this challenging task. Thus, there is a need for a strategic shift and the introduction of a number of projects for the country to realise this goal.

The layout of this annual report comprises of the following sections: following this introduction, Section Two covers the overview of the South African labour force. It presents the trends in the SA labour market looking mainly at the Unemployment Insurance Fund data, e.g., claims on unemployment benefits to ordinary unemployed received and processed within the Department that reflect the level of job losses in the country from April 2012 to March 2013.

Section Three provides an analysis on the job opportunities created or advertised during the same period. In other words, what occupational skills were in demand, opportunities created per industry, opportunities created per province as well as the types of vacancies created, whether full/part-time or contract. Section Four concludes by remarking on the challenges of unemployment in the South African economy during the financial year 2012/13 and also recommends possible solutions to these challenges, as discussed in various research papers.

¹ Abraham Edwards (AECI's CEO), Business News, Thursday, 26 July 2012

² The Bureau for Economic Research (BER), Unemployment to persist as SA faces slower growth, Business News, Friday, 27 July 2012

³ In her budget vote, the Minister of Labour stressed the following: "Alongside our sister departments, we realise the shortage of skills in our economy and are working to make a difference in this field. To this end, we have partnered with South African Maritime Safety Association to enable them to tap into our system for the cadets they want to put through the paces of training. We have also agreed to work with the DoHET to have these cadets placed at FET colleges. As you will hear later, we have also partnered with SETAs to provide training for youth and unemployed people."

⁴ Minister of Labour (Hon. M.N. Oliphant, Budget vote, 22 May 2013).

2. OVERVIEW OF THE LABOUR FORCE TRENDS IN SOUTH AFRICA

In his 2013 budget speech⁵, the Minister of Finance stressed that there are signs of improvement in the world economy, though the outlook remains troubled. Growth is still muted in the United States and Japan and much of Europe is in recession. Furthermore, he reminded South Africans that South Africa's economy is growing at a slower rate than projected at the time of the 2012 budget. GDP is projected to grow at 2.7% in 2013. This might indicate slow employment growth in the country if one considers the correlation between growth and employment.

Looking at the official employment statistics, the first quarter of 2013 QLFS results show that about 44 000 jobs were created between the fourth quarter of 2012 and the first quarter of 2013. This represents an increase of 0.3% between the two quarters. Both Agriculture and Private Household's sectors recorded an increase of 83 000 jobs between quarter four of 2012 and quarter one of 2013. On an annual basis, the employment statistics have grown by 1.5% where 199 000 jobs were created between quarter one of 2012 and quarter one of 2013. Furthermore, although the 0.9% GDP increase was recorded in the first quarter of 2013, it was not high enough to support the overall employment and development targets as outlined in the NGP or NDP.

These results prove the belief that the economy is not creating enough jobs and there are also concerns about the quality of the jobs being created recently. More and more economically active people are becoming discouraged and leaving the labour market altogether, which could have lasting devastating effects, especially amongst youth and women. According to StatsSA⁶, unemployment amongst 15-24 year olds (52.9%) remains the highest among all age groups and has been on the increase. Statistical data also reflect that there is a lot that needs to be done in as far as gender equality is concerned. 49.1% of the unemployed are women.

While the percentage change of those who lost hope to actively search for jobs in the economy increased by 3.2% between quarter one of 2013 and quarter four of 2012, it declined year-on-year by 5% in March 2013. Yet the challenge is to absorb the surplus unskilled labour from earlier years as well as new entrants towards halving the unemployment rate by 2020.

It is also reported that 65.3% of the unemployed are long-term unemployed and have been looking for work for a period of one year or longer. On one hand, this might be as a result of people who are looking for employment lack certain required skills and experience but on the other hand this might also be as a result of the economy of the country that does not have enough employment opportunities to cater for everyone looking for employment, as close to two-thirds (59.4%) of the job seekers did not have matric. In other words, firms may be unwilling to hire recent school leavers because they need training to build skills and once trained (at some expense), the skilled workers may leave for other jobs⁷.

2.1. Labour market information based on survey data

This section provides an in-depth analysis regarding the trends on key labour market indicators as published by Statistics South Africa. For the purpose of this report, only a few labour market indicators are presented in order to align them to the vacancies time series data collected by the Department of Labour. Caution should be taken when one strictly compares the survey and administrative trends as the two sets of data results complement one another for a better understanding of the South African labour market.

A summary of the latest South African labour market status according to the "official statistics" released by Statistics South Africa (Stats SA) is provided below. It is observed that unemployment remains high at an average of 25.2% in March 2013. Ling (2013) said that South Africa's high unemployment rate requires a far more complete and bolder solution, that has the role of the private sector firmly at its core, supported by appropriate infrastructure development⁸.

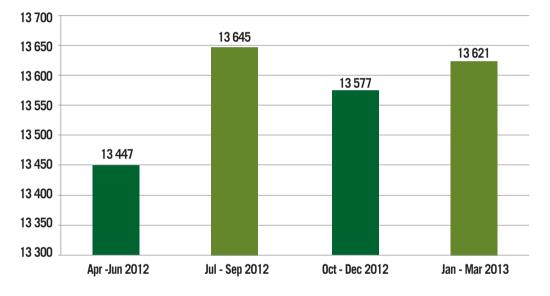

Figure 1: Total number of employed people, April-June 2012 to January-March 2013 ('000)

Source: Stats S.A, Quarterly Labour Force Survey (QLFS), own calculations

According to **Figure 1** above, the percentage of people employed fluctuates between quarters in the financial year 2012/13. It is noted that there is a positive employment growth between quarter three and two of 2012, also between quarter one of 2013 and quarter four of 2012, but it declined between quarter four and quarter three of 2012. Overall, the employment growth rate during the financial year under review, averaged around 0.4%.

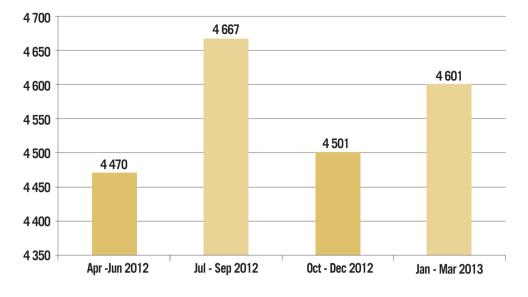

Figure 2: Total number of unemployed people, April-June 2012 to January-March 2013 ('000)

Source: Stats S.A, Quarterly Labour Force Survey (QLFS), own calculations

South African's uneven unemployment figures may also reflect a different kind of business cycle. It is often expected that every year between quarter three and quarter four in the financial year, the unemployment rate will increase because of seasonal employment growth during December. From **Figure 2**, unemployment increased by 4.4% between quarter three and two of 2012, decreased by 3.6% between quarter four and three of 2012 and then increased by 2.2% between quarter four of 2012 and quarter one of 2013. Surprisingly, the unemployment rate during the financial year under review averaged at 25.2% in March 2013 which was also recorded in March 2012. On the other hand, in September 2012, the unemployment rate was at 25.5% associated with 1.2% increase on quarter to quarter changes in the real GDP at market prices. However, it is observed that the links between growth and jobs are not instantaneous. It takes time for disappointing growth to translate into weak employment because employers hesitate to fire people⁹.

Considering the population group and gender distribution, between quarter four of 2012 and quarter one of 2013, the unemployment rate increased among the black African population by 0.3%. However, there is an indication that unemployment has also increased for the White population group at 1.6%. Unemployment rates for Indian/Asian and Coloured population has decreased by 0.7% and 0.2% respectively. Although the rate of unemployment difference between men and women has narrowed from 6.6% to 4.1% from quarter one of 2008 to quarter one of 2013, this gap still remains higher than the national unemployment average.

| Total | 13 446 | 13 645 | 13 576 | 13 621 |

Table 1: Employment by occupation April 2012 to March 2013 ('000)

Source: Stats S.A, Quarterly Labour Force Survey (QLFS), own calculations

Table 1 shows that there is a growing need for qualified and skilled people in the South African labour market. In both quarter four of 2012 and quarter one of 2013 or year-end March 2012 to year-end March 2013 changes, employment was created in plant and machine operators, professionals and managers occupational categories. For example, between quarter four of 2012 and quarter one of 2013, jobs were mostly created in the plant and machine operators category, that is 83 000 jobs from 1 139 000 to 1 222 000; Professionals, that is 65 000 jobs from 805 000 to 870 000 and Managers, that is 40 000 jobs from 1 075 000 to 1 115 000.

Employment has decreased in the semi-skilled and less skilled occupations. There was a decrease in craft and related trade category by 87 000 jobs from 1 660 000 to 1 573 000, sales and services by 45 000 jobs from 1 996 000 to 1 951 000, and elementary by 30 000 jobs from 3 034 000 to 3 004 000, as well as clerical by 8 000 jobs from 1 443 000 to 1 435 000 over the same quarter during the financial year 2012/13.

Table 2: Educational level of the unemployed April 2012 to March 2013 ('000)

| Highest level of education of the unemployed | Apr - Jun 2012 | Jul - Sep 2012 | Oct - Dec 2012 | Jan - Mar 2013 |
|--|----------------|----------------|----------------|----------------|
| No schooling | 66 | 73 | 66 | 68 |
| Less than primary completed | 294 | 319 | 319 | 287 |
| Primary completed | 196 | 208 | 201 | 169 |
| Secondary not completed | 2 096 | 2 246 | 2 171 | 2 209 |
| Secondary completed | 1 498 | 1 531 | 1 447 | 1 547 |
| Tertiary | 280 | 276 | 280 | 295 |
| Other | 40 | 15 | 17 | 26 |
| Total | 4 470 | 4 668 | 4 501 | 4 601 |

Source: Stats S.A, Quarterly Labour Force Survey (QLFS), own calculations

The results presented in **Table 1** above are also influenced by the outcomes that are reflected in **Table 2**. The SA labour market has shown a decrease in the number of those unemployed with less than primary school and primary school completed, either in quarter four of 2012 to quarter one of 2013 or year-end March 2012 to year-end March 2013 changes. Surprisingly, the number of those unemployed with tertiary education remained the same.

The results reflect a very disturbing picture, in particular for those who are actively searching for work, in light of a very low

absorption rate of 41% in the country, as compared to international standards where it is above 60%. For example, the unemployment rate in Singapore (1.8%), Hong Kong (3.5%) and Norway (3.6%) had remained below 5% over time with higher labour absorption rates.

In South Africa, lack of education and suitable skills have characterised most of the unemployed people, which limit their chances to be absorbed in the three occupational categories mentioned above: Plant and Operators, Professional and Managers. The Star newspaper reported that the graduation rate among undergraduates in SA's 23 public universities is 15%. The rate for Masters' students is 20% and for doctoral students 12%. These figures are contained in the Department of Higher Education and Training's first annual statistical report. The reasons for these low rates are said to include financial constraint where students enrol for courses but don't have the funding to see them through, lack of academic preparedness and students not getting enough support from their universities. The highest failure rates were in the maths and science programmes, technology and business studies. Students who hopped from one course to another also contributed to low graduation rates¹⁰.

Despite the argument that graduates struggle to find jobs, the truth of the matter is that the most required qualification in the job market is a tertiary qualification and that graduates have shown the lowest percentage of unemployment against low levels of education of the active population in the labour market.

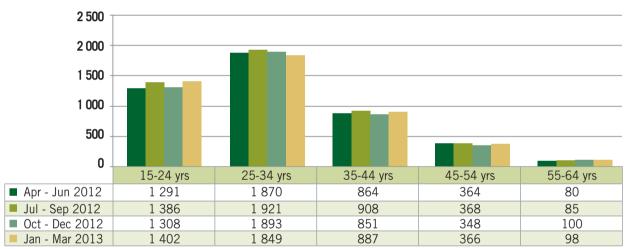

Figure 3: Unemployment level by age group, April-June 2012 to Jan-March 2013 ('000)

Source: Stats S.A, Quarterly Labour Force Survey (QLFS), own calculations

It is clear that unemployed young people comprise a large number of those with less than primary school, primary school completed and some had tertiary education as noted in **Table 2** above. This is a big challenge, as the South African Government has prioritised job creation towards 2020. So far, the trends have shown that employment increased in community and social services where the public sector has maintained a positive trend regarding job creation. On the other hand, the private sector (firms) remained cautious of expanding capacity and employing more people as they argue because of the current economic challenges, e.g. labour unrest, EuroZone economic crisis etc. Thus, employment is likely to be driven by the public sector's infrastructure programme in the future.

Figure 3 show that the highest age group that was mostly affected by unemployment in all the quarters is 25-34 years with 1 870 000, 1 921 000, 1 893 000 and 1 849 000 for quarter two, three, four of 2012 and quarter one of 2013, respectively. This trend follows the very same trend from the previous financial years. The following age group which is also affected by high level of unemployment is 15-24 years with 1 291 000, 1 386 000, 1 893 000 and 1 402 000, respectively. The age group of 45-65 years seems to be less affected by the unemployment crisis in the country.

¹⁰ South African Labour News, Tuesday, 11 June 2013

2.2. Labour market information based on administrative data

The Department of Labour collects a range of statistical data including the Unemployment Insurance Fund (UIF) and the Job vacancies data. This section provides information to monitor and evaluate the Department's performance and progress in implementing the labour laws, and also to monitor the skills that are in demand in the South African Labour Market. These statistics can also assist decision makers with planning and making informed decisions when reviewing the labour laws and policies.

The Unemployment Insurance Fund (UIF) provides short-term financial assistance, aimed to assist and protect people who are financially distressed due to unemployment, maternity, illness, adoption and death. Out of these five types of benefits, unemployment benefits are the most relevant indicator to measure job losses in the Labour Market. The reasons that qualifies claimants for unemployment benefits are dismissals, end of contract, business closure and retrenchments.

| Province | Apr - Jun 2012 | Q to Q change | Jul - Sep 2012 | Q to Q change | Oct - Dec 2012 | Q to Q change | Jan - Mar 2013 |
|---------------|-------------------|------------------|-------------------|------------------|-------------------|------------------|-------------------|
| Eastern Cape | 13 249 | -886 | 12 363 | 4 854 | 17 217 | -2 363 | 14 854 |
| Free State | 7 494 | -7 | 7 487 | -790 | 6 697 | 664 | 7 361 |

| Limpopo | 11 338 | 317 | 11 655 | 3 278 | 14 933 | -4 548 | 10 385 |
| Mpumalanga | 10 800 | 691 | 11 491 | 2 299 | 13 790 | -1 185 | 12 605 |
| North West | 5 483 | -1 433 | 4 050 | 38 | 4 088 | 2 878 | 6 966 |
| Northern Cape | 6 661 | -587 | 6 074 | -232 | 5 842 | -997 | 4 845 |
| Western Cape | 27 135 | 1 003 | 28 138 | -3 712 | 24 426 | -2 911 | 21515 |
| Total | 149 572 | -2 918 | 146 654 | 663 | 147 317 | -1 208 | 146 109 |

Table 3: Number of ordinary claims created by province, April 2012 to March 2013

Source: Department of Labour, UIF Data 2012/13, own calculations

Looking at the number of ordinary claims received in the financial year 2012/13, **Table 3** shows that most of the ordinary claims were received in Gauteng, followed by KwaZulu-Natal and the Western Cape in all quarters.

Provinces that experienced the lowest decrease during quarter two to quarter three of 2012, were Northern Cape, followed by the Free State and Gauteng. However, overall, the number of ordinary claims decreased between quarter one and two of 2012/13 financial year by 2 918 claims then increased between quarter two and three of 2012/13 by 663 claims and declined again between quarter four and quarter one of 2012/13 by 1 208 claims.

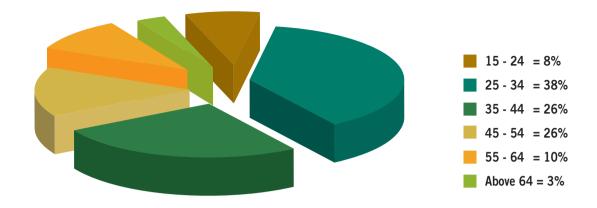

Figure 4: Ordinary unemployment claims by age group, from April 2012 to March 2013

Source: Department of Labour, UIF Data 2012/2013, own calculations

Figure 4 illustrates the percentage distribution of ordinary claims received by age group. Young people (15-34 years) constitute about 46% of the total ordinary claims received during the financial year 2012/13. The lowest level of ordinary claims applications are seen at the age of 66 plus. There is an indication that this age group is less affected by job losses for consecutive years.

As in the QLFS results, the problem of youth has been getting worse for several years in the South African labour market. One of the critical issues to be improved is that of the relationship between education and the labour market. Government efforts can be applauded to address the matching between job seeker skills and opportunities registered in the Public Employment Services (PES) but private companies should also improve their responsibility in investing in the youth.

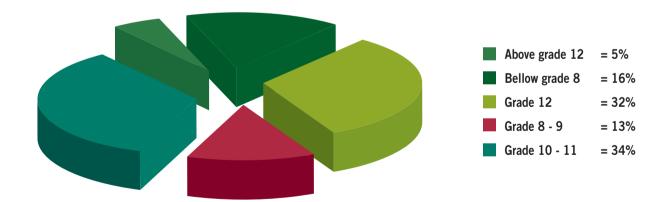

Figure 5: Educational level of Ordinary unemployment claims, from April 2012 to March 2013

Source: Department of Labour, UIF data 2012/2013, own calculations, excluding unspecified

As shown in **Figure 5** above, people with above grade 12 qualifications (5%) were less affected by job losses. This is also reflected across the OECD¹¹ where the statistics show that people who left school at the earliest opportunity are twice as likely to be unemployed as university graduates. On the opposite, people who have not yet completed their matric are mostly affected by job losses as they represented the highest percentage category (grade 10-11) at 34% amongst those who submitted claims for ordinary benefits.

¹¹ The Economist, April 27th 2013.

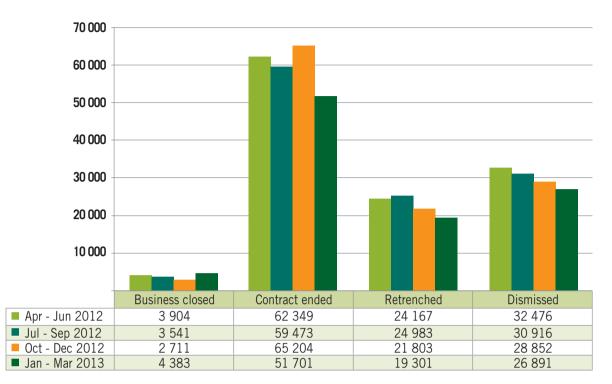

Figure 6: Reasons for termination in commercial employment, from April 2012 to March 2013

Figure 6 attempts to provide the reasons for terminations of employment as captured on the UIF database per quarter in the financial year 2012/13, e.g., ordinary unemployment claims. "Contract ended" was the most prominent cause of job losses in the country as in this type of employment there is no guarantee of continuity. However, when looking at each reason per quarter, "business closed" recorded 4 383 or 30.1% of the total number in quarter four, "contract ended" was 65 204 or 27.3% of the total number in quarter three, "retrenchment" recorded 24 983 or 27.7% of the total number in quarter two and "dismissal" amounted 32 476 or 27.3% of the total applications in quarter one of the financial year 2012/13.

More contracts were ended during October to December 2012. This is the period when the SA economy was affected as a result of continued industrial actions in sectors like mining, agriculture and transport.

Source: Department of Labour, UIF data 2012/2013, own calculations

3. TREND ANALYSIS OF JOB VACANCIES

3.1 Job vacancies by Organising Framework of Occupation (OFO)

The Job Opportunities Index (JOI) measures the number of jobs advertised in the major newspapers covering all the provinces of South Africa. This type of analysis assists in developing a time series data of skills in demand in the South African Labour Market. This information helps decision-makers, work-seekers, researchers and all other stakeholders in making informed decisions for policies, employment creation and opportunities.

Advertised jobs have been coded according to the Occupational Framework of Occupations (OFO) version 09. However, it is worth noting that OFO does not accommodate all job titles especially the newly introduced ones. The OFO is a skills–based coded classification system that encompasses all occupations in the South African context. The classification of occupations is based on a combination of job titles, tasks, experience, skill levels and specifications. Therefore, the purpose of OFO is to enable broad discussions on labour market trends based on a common language of the classification system.

This section reports on job vacancies advertised by employers as extracted from the JOI data base.

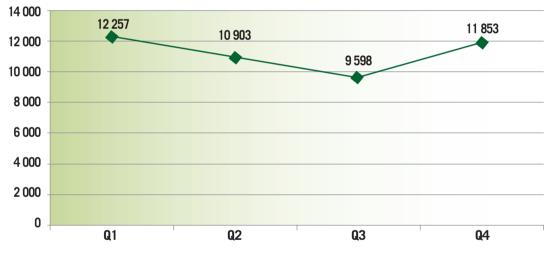

Figure 7: Total number of job vacancies in the financial year 2012/13

Source: Department of Labour, Job Opportunity Index database 2012/13

10

The total number of job vacancies declined from quarter two until quarter three then it began to recover during quarter four of the 2012/13 financial year. According to **Figure 7**, between quarter one and two in the financial year, job vacancies advertised declined by 1 354 from 12 257 to 10 903 followed by another decrease of 1 305 from 10 903 to 9 598 between quarter two and quarter three over the same period. The South African labour market regained momentum by an increase in job opportunities of more than 2 000 from 9 598 to 11 853 vacancies between quarter four and quarter three of 2012/13. In total, 44 611 job opportunities were recorded during the financial year under review (2012/2013). There is a decrease of 15 822 vacancies recorded as compared to the previous financial year 2011/12 where there were 60 433 vacancies recorded in the JOI database.

| | April-June 2012 | July-Sept 2012 | Oct – Dec 2012 | Jan-March 2013 | Total |
|--|--------------------|----------------|----------------|-------------------|-----------------------|
| Managers | 3 356 (27.4%) | 3 656 (33.5%) | 2 936 (30.6%) | 3 501 (29.5%) | 13 449 (30.1%) |
| Professionals | 4 407 (36.0%) | 3 277 (30.1%) | 3 260 (34.0%) | 3 782 (31.9%) | 14 726 (33.0%) |
| Technicians and trade workers | 1 313 (10.7%) | 1 338 (12.3%) | 680 (7.1%) | 1 097 (9.3%) | 4 428 (9.9%) |
| Community, social and personal service workers | 649 (5.3%) | 323 (3.0%) | 706 (7.4%) | 486 (4.1%) | 2 164 (4.9%) |
| Clerical and administrative workers | 1 537 (12.5%) | 1 439 (13.2%) | 1 423 (14.8%) | 2 025 (17.1%) | 6 424 (14.4%) |
| Sales workers | 540 (4.4%) | 546 (5.0%) | 331 (3.4%) | 416 (3.5%) | 1 833 (4.1%) |
| Machinery operators and drivers | 218 (1.8%) | 168 (1.5%) | 124 (1.3%) | 222 (1.9%) | 732 (1.6%) |
| Elementary workers | 237 (1.9%) | 156 (1.4%) | 138 (1.4%) | 324 (2.7%) | 855 (1.9%) |
| Total | 12 257 | 10 903 | 9 598 | 11 853 | 44 611 |

Table 4: Quarterly number of vacancies by occupational group, from April 2012 to March 2013

Source: Department of Labour, Job Opportunity Index database 2012/13

There is an indication of a high demand for managers and professional workers in the South African labour market based on the results above. This indicates the need for a high level of education and skilled labour rather than unskilled and less experienced workers in the country. Surprisingly, there are currently a large number of young people with low educational achievement associated with low skills. Few unemployed people have a tertiary educational qualification and they are not easily absorbed into those occupational categories. One needs to scrutinise also the content of these tertiary qualifications in line with what skills companies are currently absorbing in the labour market. This is a matter of further research in the future.

From **Table 4** results above, the same trends as previously published in the 2011/12 financial year exist in this financial year. What matters is not just the number of vacancies recorded over the years, but the trend in skill in demand in line with the occupational categories. Thus, all vacancies advertised and captured in the Department's database point to high skill occupational categories such as managers and professionals. Clerical and administrative workers adverts have also received a small share of vacancies (above 10%), followed by technicians and trade workers, community and personal service workers, and sales workers across all quarters in 2012/13 financial year. Few vacancies were recorded for the elementary and machinery operators and drivers as a result of limited newspapers considered during the period under review¹².

12 It is also understood that other vacancies were not being accessible because of human resources constraints and others vacancies not published in the community media.

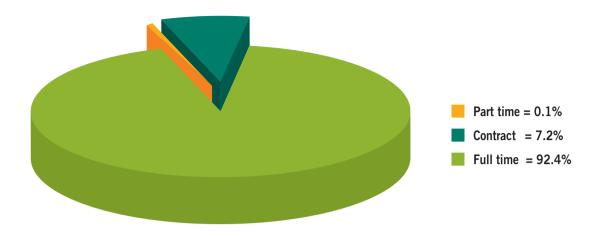

Figure 8: Vacancies by employment type in the financial year 2012/13

Source: Department of Labour, Job Opportunity Index database 2012/13

Decent work is also characterised by sustainability and security of work. Most people would like to have a permanent fulltime job in order to plan and sustain their current living conditions. Workers ought not to be idle after the contract has been terminated. **Figure 8** shows that most of the vacancies recorded in the database were full-time employment type (92.4%) as compared to 7.5% of contract employment type in 2012/13 financial year.

| | April-June 2012 | July-Sept 2012 | Oct-Dec 2012 | Jan-March 2013 | Total |
|---------------|-----------------|----------------|--------------|----------------|----------------|
| Eastern Cape | 1 133 | 1033 | 663 | 897 | 3 726 (8.4%) |
| Free State | 307 | 270 | 272 | 225 | 1 074 (2.4%) |
| Gauteng | 507 | 1 043 | 966 | 1 615 | 4 131 (9.3%) |
| Head Office | 6 919 | 6 145 | 5 985 | 6 459 | 25 508 (57.2%) |
| KwaZulu Natal | 44 | 64 | 105 | 189 | 402 (0.9%) |
| Limpopo | 174 | 160 | 141 | 313 | 788 (1.8%) |
| Mpumalanga | 959 | 580 | 279 | 648 | 2 466(5.5%) |
| North West | 811 | 290 | 248 | 653 | 2 002 (4.5%) |
| Northern Cape | 269 | 199 | 242 | 270 | 980 (2.2%) |
| Western Cape | 1 134 | 1 119 | 697 | 584 | 3 534 (7.9%) |
| Total | 12 257 | 10 903 | 9 598 | 11 853 | 44 611 (100%) |

Table 5: Distribution of vacancies per provincial office, from April 2012 to March 2013

Source: Department of Labour, Job Opportunity Index database 2012/13

Table 5 shows that of the total 44 611 vacancies, Head Office has recorded the most number of vacancies amounting to 25 508 (57.2%). Gauteng recorded the second highest number of vacancies amounting to 4 131(9.3%), followed by the Eastern Cape with 3 726 (8.4%) and the Western Cape with 3 534 (8%). The lowest recorded vacancies are reflected in KwaZulu-Natal with 402 (1%) followed by the Northern Cape province with 980 (2.2%).

3.2 Job vacancies by industry (Standard Industrial Classification)

In line with occupational categories above, in this section the industry sectors¹³ where vacancies were generated are examined. This trend might also indicate which sector to promote and sustain while the global economic crisis is still affecting the economic growth prospect of the country. There is a need of growth boosting reform which will also stimulate growth in other continents as a result of globalisation linkages. **Table 6** provides, to some degree, how small and big sized firms are responding to investment on employment creation based on the number of vacancies advertised.

| | April-June 2012 | July-Sept 2012 | Oct – Dec 2012 | Jan-March 2013 | Total |
|--|--------------------|-------------------|-------------------|-------------------|----------------|
| Agriculture, hunting, forestry and fishing | 53 | 67 | 104 | 96 | 320 (0.8%) |
| Community, social and personal services | 7 020 | 7 016 | 6 896 | 7 337 | 28 269 (63.4%) |
| Construction | 200 | 196 | 146 | 243 | 785 (1.8%) |
| Electricity, gas and water supply | 522 | 208 | 116 | 282 | 1 128 (2.5%) |
| Financial intermediation, insurance, real estate and business services | 2 403 | 1518 | 1 110 | 1 781 | 6 812 (15.3%) |
| Manufacturing | 520 | 521 | 481 | 510 | 2 032 (4.6%) |
| Mining and quarrying | 483 | 406 | 226 | 688 | 1 803 (4.0%) |
| Private households | 37 | 29 | 18 | 48 | 132 (0.3%) |
| Transport, storage and communication | 503 | 435 | 214 | 443 | 1 595 (3.6%) |
| Wholesale and retail trade | 516 | 507 | 287 | 425 | 1 735 (3.9%) |
| Grand Total | 12 257 | 10 903 | 9 598 | 11 853 | 44 611 (100%) |

Table 6: Number of job vacancies by industry, from April 2012 to March 2013

Source: Department of Labour, Job Opportunity Index database 2012/13

Note: In some cases, job advertisements did not have economic sectors information.

Table 6 indicates that for the financial year 2012/2013, the industry that created more opportunities was community, social and personal services with a total of 28 269 (63.4%). The financial industry was the second industry sector with 6 812 (15.3%) vacancies, followed by manufacturing and mining and the lowest number of vacancies was recorded in the construction (1.8%), agriculture (0.8%) and private households (0.3%) industries. As discussed earlier, it transpired that the public sector which includes the community, social and personal services was the most favourable sector to respond to the call of the South African Government regarding job creation during the period under review. The private sector is slowing the pace of job creation in the economy. The results in **Table 6** are the recipe of strong partnership amongst all key players in the economy - Government, Organised Labour and Business.

¹³ These industries are classified in accordance with Standard Industrial Classification of All Economic Activities (SIC) (Fifth Edition). SIC was developed with the guide of the International Standard Industrial Classification of All Economic Activities (ISIC) which was adopted since 1948.

4. CONCLUSION

14

There is a need to wake and tackle the youth unemployment problem in the South African labour market, as they constitute the majority in the working age population group (15-64 years). While some positive trends in employment where recorded in the country, young people are still being exposed to "generation-jobless" as it is the case of the global rise in youth unemployment. Unemployment is a fact in the country and it needs drastic and immediate actions to be taken to heal the situation.

The analysis results in this annual report prove the belief that the economy is not creating enough jobs and there are also concerns about the quality of the jobs being created recently. More and more economically active people are becoming discouraged and leaving the labour market altogether, which could have lasting devastating effects, especially amongst youth and women.

In South Africa, the lack of education and suitable skills have characterised most of the unemployed people. Overall, the results in this annual report demonstrate that all vacancies recorded in the Department's database point to high-skill occupational categories such managers and professionals, and most of these jobs are in the public sector.

After many Government attempts to reduce unemployment through the implementation of various policies, unemployment seems to continue to threaten our democracy. It appears that those who continue to be disadvantaged are those historically disadvantaged groups.

The lack of education and poor levels of skills and experience have made a serious dent on human capital, whereas human capital plays a pivotal role in economic growth and the development of the country. Increasing productivity will see us achieving economic growth, hence achieving unemployment reduction. The achievement of this goal would be by working together as a nation. All players in the economy must support and commit to the new vision as outlined in the National Development Plan (NDP).

4.1. Policy implications to address the challenge of job creation:

- Amongst the Department's initiatives, in June 2012, the Department officially launched the Jobs Fairs and Summits that were conducted in all nine provinces. These Jobs Fairs were intended to provide an opportunity for work seekers to meet prospective employers, in both private and public sectors and other organisations that can assist with placement in different forms of employment or in learning opportunities. This initiative should be applauded and supported in future
- There is a need for a complete and bolder solution in the country. A collaborative partnership between Government, Organised Labour, Business and Civil Society Organisations in building and addressing the high unemployment rate in the country, is strongly recommended
- Both the public and private sector need to be equally involved in the programme of employment creation, in particular with the new infrastructural development projects
- Companies should find young people with the right skills, this in turn implies that Government must improve education with both a new vigour and aim to implement policies that will guarantee students a job while they are still studying or getting experiential training
- Government should take vigorous steps to strengthen public enforcement and fight racial discrimination and promote employment equity.

5. ANNEXURE

5.1. Methodology

The starting point for a structured approach to job vacancy analysis, is the development and maintenance of a Job Opportunity Index (JOI). This Index is composed of the collection of job offers advertised in the national and provincial newspapers. In most cases, newspapers are collected on a weekly basis.

In 2003, the Department of Labour started to capture vacancies from the Star newspaper. The vacancies were captured once per month for a period of 14 months. In April 2004, job vacancies began to be captured from the Careers, a supplement of Sunday Times.

With the changes within the economy, where labour is less needed, due to a technological impact, the need for a more skilled labour force is becoming intense. JOI therefore provide signals for skills that are in high demand within the current economy. These vacancies are classified and presented in terms of occupation and industry.

Why does the Department of Labour collect vacancies data?

South Africa's skills development policies (which were previously the mandate of the Department of Labour) have been formulated on the premise that demand-led skills development is the key to success in the current economic environment. The purpose of these policies is therefore to bring about a commitment to high-quality lifelong learning, building on a number of mechanisms that aim to ensure a clear link between market demand and supply of skills.

These include a stakeholder-driven skills development system and a levy-grant system which allows for decisions to be taken close to the demand for and beneficiaries of skills development. The importance of analysis of labour market demand and skills development needs to improve the match between supply and demand. Thus the following can be noted:

- JOI can be used to improve the way in which labour markets function by pinpointing emerging labour shortages
- JOI could contribute to the formulation of policies that would help to minimise fractional unemployment and reduce structural joblessness
- JOI could also throw additional light on the demand-supply condition in the labour market in relation to changing wage levels.

Intended audience of the JOI:

- Business cycle analysts: determine insufficient aggregate labour demand
- South Africa's skills development policy makers: design training programmes to meet the labour needs of the South African Economy
- Labour organisations: evaluate the demand for the services of their members and to develop their policies on training, apprenticeship and collective bargaining
- Work seekers: improved counselling on where the best job opportunities are for work seekers and new entrants in the labour market
- Sector Education and Training Authorities (SETAs) for their Sector Skills Plans (SSPs)
- The Department of Basic Education (DoE) for curriculum development that is responsive to economic challenges.

JOI data collection method:

Four steps used to collect JOI data. These are:

Step 1:

• Newspapers are collected and 'individual' advertisements numbered (this makes cross referencing and quality control easier). Individual advertisements may comprise of one or more job offers

• The allocation of an occupational code using the Organising Framework for Occupations (OFO) is not done on the basis of the job title. It is vital that the whole advertisement is read, as job titles may be misleading.

Step 2:

- An occupational code is located on the following basis:
 - 1. What are the educational requirements, major functions and experience, required to perform a job?
 - 2. The skills required to perform a job. (What do we mean by "skills"? An ability to perform a productive task at a certain level of competence)
 - 3. Skill specialisation defined in terms of: range and complexity of the tasks; field of knowledge required; tools or equipment used; materials worked on or information worked with; goods or services provided.

Skill level - determined by level or amount of formal education and training (amount of previous experience in a related occupation; amount of on-the-job training required to competently perform the set of tasks required for that occupation).

Step 3:

• The allocation of the Sector Industry Code (SIC) is done up to the major division level, 1 digit. In most advertisements no reference is made to the name of the employer.

Step 4:

- Data is captured on a spread sheet. The data is analysed, and a report is produced covering the financial year (April to March)
- It is then published, through the Department of Labour's website for public consumption and distribution of hard copies to other stakeholders.

| OFO CODE | OCCUPATION | Apr-Jun 2012 | Jul-Sep 2012 | Oct–Dec 2012 | Jan-Mar 2013 | TOTAL |
